DATABASE SYSTEMS ENGINEERING AND DISTRIBUTED BACKEND DEVELOPMENT (25CS1302E)

Y25 - 2026-2027 Trimester - 4

Project Abstract Submission Form

Sec No-	Team No-	Project Title- Expense Splitter and Group Budget Manager

1. Abstract

Expense Splitter and Group Budget Manager is a database-based application designed to help groups manage shared expenses and budgets in a simple and organized way. In situations such as trips, roommates, events, or group activities, people often find it difficult to keep track of who paid for what, how much each person owes, and whether the group is staying within its budget. The proposed system will maintain details of users, groups, expenses, contributions, and settlements in a structured database.

The system will allow users to create groups, record expenses, assign participants, calculate individual shares, and track pending or settled payments. The database will use relational tables and appropriate relationships to maintain data consistency and avoid duplication. SQL queries, joins, aggregation, constraints, and transactions will be used to generate useful expense and budget reports and ensure reliable updates. The project will provide a simple way for groups to monitor their spending and settle expenses accurately.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520030406	BUSALA LAXMI PRAVEEN	
2520030368	KAMMILI SATYA CHARAN	
2520030192	KUVIRA AMBALA	

3. Frameworks / Platforms / Software Used

- PostgreSQL – Relational database management system for storing and managing users, groups, expenses, budgets, and settlements.
- SQL – For database creation, queries, joins, aggregation, constraints, and transactions.
- FastAPI – Backend framework for developing REST APIs and connecting the application with the database.
- Python – Backend programming language.
- SQLAlchemy – For database integration and interaction with PostgreSQL.
- Postman – For testing and validating the REST APIs.
- GitHub – For source-code management and project collaboration.
